

1 QUESTION CONTRACT

Specify the contract

Read the legacy question

Target entity · time / interval
Coordinate frames · quantity
Units · serialization

Resolve ambiguity against sources

Frozen source artifacts

ScanNet

raw poses · alignment · objects

Waymo

vehicle poses · calibration · tracks

Omni6DPose

ROPE poses · object metadata

2 SOURCE RECONSTRUCTION

Reconstruct the target

Use official annotations
under the explicit contract

- 1 **Resolve entity and time**
- 2 **Align coordinate frames**
- 3 **Apply the physical operator**

Task-specific quantities

Box → camera coordinates
Motion → distance and rates
Forward axis → gravity heading

**Source-backed answer
in declared units and format**

3 ADJUDICATION

Record a row verdict

Contract + source evidence

Compare the released detail
under a comparable contract

Retained

Same verified value

Corrected

Same quantity; new value

Re-contracted

Explicit new convention

Excluded

No uniquely scoreable answer

**Exclusion ledger
row-level reasons and evidence**

4 ANSWER INTERFACE

Build and test choices

Generate labels and candidates separately

Synthesize candidates

Feasible options; separate key stream

Validate structure and geometry

One key · five distinct, valid options

Run option-only attacks

Rank · field majority · centroid / medoid

Refine candidates from stress tests

**Versioned QA + validation reports
with source and option checks**
